

Information Request Form Crystal Springs Lagoon Project

**Information Request
Number:**

Information Request No. 3

Submitted by:

The Rural Municipality of Gimli

Date Submitted:

February 6, 2026

Subject Matter:

Groundwater Management (Quality)

Reference document:

N/A

Request: The project proposes using a geosynthetic liner to reduce infiltration to the groundwater from within the cells. Given the foregoing:

- 1. Can the proponent advise whether they investigated if the effluent discharge to drain/creek would impact groundwater over years of release and if so, what conclusions they drew?*
- 2. Can the proponent comment on why there are no up gradient and down gradient monitoring wells that could be used to determine whether there is any impairment to the groundwater sources so that remedial action may be taken quickly.*
- 3. Can the proponent produce a copy of the groundwater study report prepared by Friesen Drillers?*
