Ladies/Gentlemen,

I reside approximately 2 kilometers outside Anola and use a well for our source of water. I have a few questions I would like answered **before** the project were to receive an okay and then release the Mine Closure and Financial security regarding contamination of the water supply.

- In the event that the "it will not happen" happens and the aqua fir is contaminated during operation, at mine closure or after long term closure what steps are being put into place to ensure there is a safe source of water for humans and animals, birds etc.?
- Where would the water supply come from, cisterns or pipes ?
- Costs, is it adequate for initial and ongoing costs?
- In the event that there are adverse effects on human / animal kingdom what is the compensation package?

Respectfully,

Paul Laroque
