Good afternoon lady and gentleman. Mr. Chairman and Commission members. I am Marvin Magwood. I have lived in Killarney for my entire life and I plan on staying for the rest of it.

I would like to take the opportunity to speak about the hog industry and how it has impacted Killarney and area.

The industry is relatively new to the area with the first large barns being built about 10 years ago and the bulk of them being built in the last 7 years.

Before the industry came to the area employment was bleak opportunities were minimal, with most of our graduating class going to university or moving back west to gain employment.
Now that the fast industry has become gated there are more than 60 full-time well-paying jobs right there in our area as well as a feed mill that has 18 employees working at it.

There are full jobs that weren't there before.

I myself have worked in the industry for 25 years now and it has given me and many others the opportunity to raise their families in the same place we were raised. I also gives us the opportunity to support our community and help keep families from becoming a retired family.

I wanted to speak on behalf of the many people that can in these facilities and talk about how the sustainable aspect of these facilities is just as important to us as it is anyone else.
- With these forms being built in the first lugar, there was already lots of good information put in the case to make sure that these forms were ready in the day they would make them entertaining. friend as well as good meals.

- The main goal of the movement has strongly set out good regulation that they're to be just like the spec- fically story within the leaflent land and make them good partners with our the sudden land owners.

- Most of the people live right in the field or surrounding area and the whole area and parks are just as important to use as anyone else. The want to protect their areas as much as many than why people are proud to say from a pig farmer, because I know we are doing our part.
I get disappointed when I tell people what I do, and they think that our industry isn't environment-friendly, when it is one of the most heavily regulated industries there is.

When the clean environment review does its audit of our industry, I will be happy to see the results so that we can prove to the province that we are doing our part to help ensure that this industry is a long-term and sustainable one. Because people like me, that make a living from this great sector of the province, would want to see it being seen from farm land to the city, because I know we are doing part.
